

Heroku Deployment

Heroku set-up and installation

Created a new app in Heroku called whats4t

Enter Heroku login command on CLI and logged into Heroku account

Entered Heroku apps command to check visibility of new whats4t app

Regular commits of Whats4T? files have already been made to the Whats4T GitHub repository

Associate the Heroku application as our master branch

- `heroku git:remote -a whats4t`

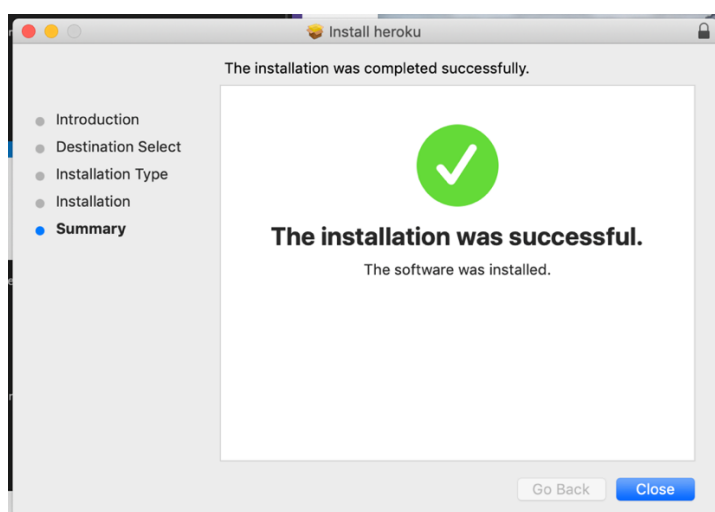

```
whats4t (cd)
gitpod /workspace/Whats4T $ heroku git:remote -a whats4t
(node:3147) [EACCES] Error Plugin: heroku: EACCES: permission denied, open '/home/gitpod/.cache/heroku/lastrun'
module: @oclif/config@1.13.2
task: runHook init
plugin: heroku
root: /usr/local/lib/h
See more details with Cmd + click to follow link
set git remote heroku to https://git.heroku.com/whats4t.git
gitpod /workspace/Whats4T $
```

- `heroku git:remote -a Whats4T`

```
gitpod /workspace/Whats4T $ heroku git:remote -a Whats4T
(node:3356) [EACCES] Error Plugin: heroku: EACCES: permission denied, open '/home/gitpod/.cache/heroku/lastrun'
module: @oclif/config@1.13.2
task: runHook init
plugin: heroku
root: /usr/local/lib/heroku
See more details with DEBUG=*
> Error: Couldn't find that app.
>
> Error ID: not_found
[Error: EACCES: permission denied, open '/home/gitpod/.cache/heroku/error.log'] {
  errno: -13,
  code: 'EACCES',
  syscall: 'open',
  path: '/home/gitpod/.cache/heroku/error.log'
}
gitpod /workspace/Whats4T $
```

Downloaded and installed the Heroku Command Line Interface (CLI) to make it easy to create and manage Heroku apps directly from the terminal.

Install Heroku for MacOS and performed standard installation

➤ Git push heroku master

```
gitpod /workspace/Whats4T $ git push heroku master
Enumerating objects: 374, done.

To https://git.heroku.com/whats4t.git
! [remote rejected] master -> master (pre-receive hook declined)
error: failed to push some refs to 'https://git.heroku.com/whats4t.git'
gitpod /workspace/Whats4T $
```

It has failed because the requirements aren't in place

➤ pip3 freeze --local > requirements.txt

Add the requirements.txt to GitHub repository

- git add requirements.txt
- git commit -m "added requirements.txt"

```
gitpod /workspace/Whats4T $ git commit -m "added requirements.txt"
[master e63565a] added requirements.txt
1 file changed, 15 insertions(+)
create mode 100644 requirements.txt
gitpod /workspace/Whats4T $
```

➤ git push heroku master

```
gitpod /workspace/Whats4T $ git push heroku master

 * [new branch] master -> master
gitpod /workspace/Whats4T $

```

Missing Procfile – an instruction to Heroku as to which file to use as the entry point to the application

Send instruction to Procfile:

- echo web: python app.py > Procfile

```

gitpod /workspace/Whats4T $ echo web: python app.py > Procfile
gitpod /workspace/Whats4T $

```

Add and commit Procfile to GitHub repository

- git add Procfile
- git commit -m "added Procfile"

```

gitpod /workspace/Whats4T $ git add Procfile
gitpod /workspace/Whats4T $ git commit -m "added Procfile"
[master 10fec08] added Procfile
1 file changed, 1 insertion(+)
create mode 100644 Procfile
gitpod /workspace/Whats4T $

```

Push to Heroku

- git push heroku master

```

remote: -----> Discovering process types
remote: Procfile declares types => web
remote: -----> Compressing...
remote: Done: 47.2M
remote: -----> Launching...
remote: Released v4

remote: Verifying deploy... done.
To https://git.heroku.com/whats4t.git
 e63565a..10fec08 master -> master
gitpod /workspace/Whats4T $

```

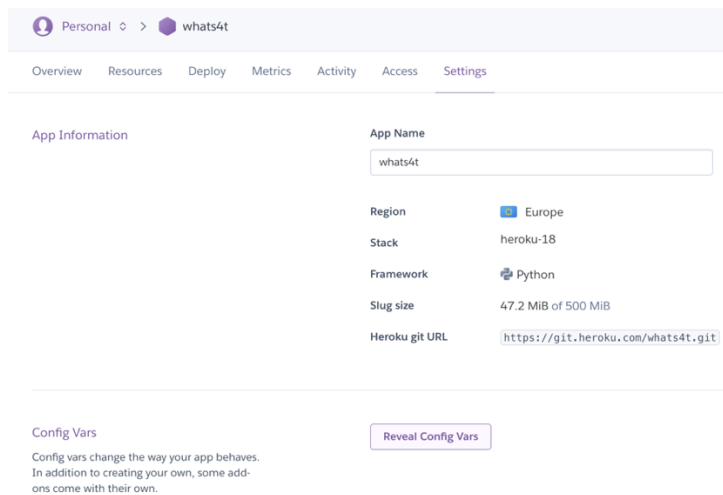

Command to run heroku application

- heroku ps:scale web=1

```
gitpod /workspace/Whats4T $ heroku ps:scale web=1
(node:4675) [EACCES] Error Plugin: heroku: EACCES: permission denied, open '/home/gitpod/.cache/heroku/lastrun'
module: @oclif/config@1.13.2
task: runHook init
plugin: heroku
root: /usr/local/lib/heroku
See more details with DEBUG=*
Scaling dynos... done, now running web at 1:Free
gitpod /workspace/Whats4T $
```

Config Variables

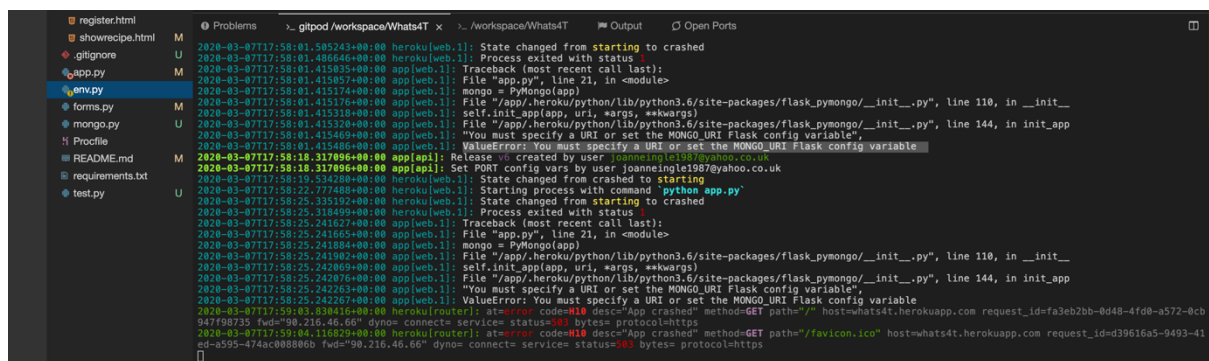

Add config variables to Heroku under Settings

Added IP and PORT to config variables

Error with running application as MONGO_URI was not added (in env.py file which is ignored by git)

Added new MONGO_URI config variable to Heroku which resolved the error

MONGO_URI and SECRET_KEY config variables added to Heroku

Config Vars

Config vars change the way your app behaves. In addition to creating your own, some add-ons come with their own.

Config Vars

IP

MONGO_URI

PORT

SECRET_KEY

KEY

Heroku has been configured to allow automatic deployment of code to Heroku when pushed to GitHub master branch

Deployment method

Automatic deploys

Enables a chosen branch to be automatically deployed to this app.

✓ Automatic deploys from `master` are enabled

Every push to `master` will deploy a new version of this app. **Deploys happen automatically:** be sure that this branch in GitHub is always in a deployable state and any tests have passed before you push. [Learn more](#).

☐ Wait for CI to pass before deploy

Only enable this option if you have a Continuous Integration service configured on your repo.

[Disable Automatic Deploys](#)

App connected to GitHub

Code diffs, manual and auto deploys are available for this app.

Connected to [JoojooBee87/Whats4T](#) by [JoojooBee87](#)

[Disconnect...](#)

↔ Releases in the [activity feed](#) link to GitHub to view commit diffs

🔄 Automatically deploys from `master`
